RL ANALYSER

Stop guessing why you lost.
Your own AI coach for Rocket League.

RL Analyser turns the replays Rocket League already saves into clear, honest coaching. It shows you what went wrong, what you're good at, and exactly what to practise next, all on your own PC.

WHAT YOU GET

Rewatch every match in 2D
A top-down replay of the whole game with every car, the ball, boost and speed. Jump straight to the moments that decided it.

An AI coach that knows the match
Get a written report with strengths, mistakes and what to work on. Then ask it things like *"what went wrong at 2:30?"*

Key moments, called out
See nobody-back spells, double commits, lost 50/50s and empty-boost stretches right before goals, each one with the game clock.

See how you compare to your rank
Find out where you sit among players of your rank ("62nd percentile, plays like Gold") and which stat is holding you back.

Weekly goals and drills
Goals are built from your weakest stats, with targets, drills and community training-pack codes you can copy in one click.

Instant post-game feedback
Finish a match and a card pops up with your result, the stats that stood out and your top finding. No clicking around needed.

WHY IT'S DIFFERENT

Private and offline
The AI runs on your own PC, and your replays never leave it.

Real numbers only
Every stat is measured from the replay data. The AI explains the numbers but never makes them up.

Zero effort
The app watches your replay folder and analyses each game in about a second.

PRICING

FREE
$0

- ✓ 2D replays and the full scoreboard
- ✓ Every stat tab, key moment and finding
- ✓ Progress across your latest 10 games

PRO
$15.99 / month
